

Recap.

- commits
- branching
- merge
- conflicts
- simple git remotes.

Today

- fast forward
- rebase
- git remote

Revisiting merge

new commit id:

C1 → C2 → b1 → C3 → b2 → C4 → b3 → C5

in main,

git merge f1

After you checked out fl, you never did any changes in main.

commit log

$c1 \rightarrow c2 \rightarrow b1 \rightarrow b2 \rightarrow b3 \rightarrow c3$

branch

A pointer to the latest commit.

In-order to merge fl in main.

$c1 \rightarrow c2 \rightarrow b1 \rightarrow b2 \rightarrow b3$

Fast-forward merge.

The problem with timestamp based commits history.

git log

$c1 \rightarrow c2 \rightarrow b1 \rightarrow c3 \rightarrow b2 \rightarrow c4$

dev1 \rightarrow 3 commits

dev2 \rightarrow 4 commits

dev3 \rightarrow 5 commits

2 options.

- ① $c1 \rightarrow c2 \rightarrow b1 \rightarrow b2 \rightarrow c3 \rightarrow b3 \rightarrow [c10]$
- ② $c1 \rightarrow c2 \rightarrow c3 \rightarrow b1 \rightarrow b2 \rightarrow b3$

rebase

In f1

rebase to main

In main

you merge f1

Git Remote

1. create a new proj in local
2. create a new repo in github ^{remote}
3. for the local repo set up the remote url
4. Push your changes to remote.

git pull origin main
